

Specially designed for the cleansing and caring of intimate areas

The intimate hygiene is an inseparable part of the regular hygiene routine. However, intimate area is extremely sensible and prone to infection and its important to be extra careful when it comes to the proper cleansing.

Proper intimate hygiene habits helps in protecting pH balance and to avoid infections such as bacteria, irritations, etc. The violation of the natural bacterial balance can cause itches, discharges, inflammations and infections. All the above can be the result of various factors such as antibiotics, a too tight pair of jeans, or an unsterile environment, etc.

Lactobacillus: the most common vaginal bacteria

- 🌸 Helps maintaining the acidity
- 🌸 Anti-bacterial activity
- 🌸 Protects the intimate are from various infections

How to maintain a proper intimate hygiene:

- ❌ **Don't use common soaps** as they wash away the natural acidic layer which acts as a protection from harmful bacteria
- ❌ **Don't use sponges to clean genital areas**, as they retain harmful bacterias
- ❌ **Wash daily** with warm water and gentle products specifically for the intimate areas
- ❌ **Dry properly with a soft cotton towel.** Keep the towel dry and change it every 3-4 days
- ❌ **Wear cotton underwear**

Specially designed products for the cleansing and caring of intimate areas

A balanced mild formula of specially selected cleansing agents that ensure proper cleansing of the intimate area without dehydrating it.

-  *With prebiotic action*
-  *Without dyes, soaps, SLS, SLES*
-  *Dermatologically & Clinically tested*

Key Ingredient Bioecolia®

Definition:

Bioecolia® is an oligosaccharide (Alpha-Glucan) obtained by enzymatic synthesis from natural sugars (sucrose and maltose). It acts as a **protective and biostimulating agent**.

Properties:

- 🌸 It provides **protection and biostimulation of natural skin defenses**
- 🌸 It performs **prebiotic action** for controlling the integrity of natural flora
- 🌸 It is a bioselective substrate for beneficial microbial flora, ecoflora, to the detriment of pathogens and undesirable flora
